Section 0303

Week 1

This week, I used AI while working on the exercises to explain some Python concepts and to give me coding examples to go off of for concepts like f-strings, normalizing a branch code, and extracting prefix, section, and cutter out of a given value. Here are my AI chat links. <https://chatgpt.com/share/68caf64c-7ca8-800c-8309-b0184e58108d>

It was very helpful, especially for exercise 15, as I didn't have a good understanding of what to do to extract the prefix. I am very used to ChatGPT, so I haven't ventured and tried any other AI assistant, but I plan on trying Grok and Claude next week, as I've heard very good things about those two. So far AI has been a massive aspect of my learning experience; finding out how I could make it more effective based on your case study was very enlightening and inspired me to find out more ways you could make it more effective. It also prompted me to start diversifying the tools I use; only using one AI assistant limits me from using different ones that might excel better situationally.
