Week 05 AI Journal Entry

This week, I experimented with using AI to see if it could guess the results of a football game before the game. I focused on individual players' performance for this prompt I wanted to see in detail which player ChatGPT thought would do best in each team.
Here are my AI chat links for ChatGPT:
https://chatgpt.com/share/68f1e2ef-8b44-800c-b1d3-159f1d38f307

I also used some of the prompt engineering concepts I learned throughout the semester to help get the most accurate data I could get based on what I needed. That being said the AI was off by a pretty good margin some of the players didn't get anywhere close to the stats ChatGPT expected to make, but overall, most of the players ChatGPT mentioned ended up being some of the top performers in their respective positions. It was fascinating; it showed AI's limits.
